COMMERCIAL FEEDING STUFFS

REPORT OF INSPECTION

1939

E. M. BAILEY

THE FEED LAW

THE statute relating to concentrated commercial feeding stuffs imposes upon the Station (1) all duties incidental to the annual registration of feeds offered for sale in the State; (2) the collection of samples for inspection and analysis; (3) the examination of all samples so collected; (4) the preparation and publication of a bulletin summarizing the results of inspection and giving other pertinent information; and (5) joint responsibility with the Dairy and Food Commissioner for rules and regulations for carrying out the provisions of the law.

The enforcement provisions of the statute are delegated to the Dairy and Food Commissioner.

The following regulations were issued by the Director of this Station and the Dairy and Food Commissioner in May, 1939, superceding those issued in Bulletin of Immediate Information No. 60, dated June, 1927.

REGULATION 1. FEEDS NOT CLASSED AS CONCENTRATED

COMMERCIAL FEEDING STUFFS

(SEC. 4717)

It is held that the law exempts from classification as concentrated commercial feeding stuffs, and therefore from registration: (1) roughages such as hays, straws, corn stover and ensilage; (2) whole grains and mixtures thereof; (3) meals made from whole grains when not mixed with other materials or with each other; (4) feed ground from whole grain and sold by the manufacturer directly to the consumer; and (5) feed mixed according to a formula furnished by the consumer, for his own use.

Clause (4), above, refers to feed ground from materials furnished by the consumer. Under clause (5), above, feed is regarded as "mixed to order" and it must be so labelled together with a statement of net weight, the name of manufacturer and the name of the customer. The formula must be stated; the analysis *need not* be given. Such feed must be sold only to the customer for whom it was mixed; if sold to others it becomes a regular brand subject to registration and other provisions pertaining to feeds in general. The suggested form of label for feed sold under clause (5) is:

- (1) Net weight
- (2) Kind of feed (State kind of feed, e.g., "horse feed", "dairy feed", "poultry mash", without private brand name or trademark)
- (3) Mixed to order for.....
(Name of customer)
- (4) Formula (give open formula)
- (5) Name of manufacturer

REGULATION 2. METHOD OF LABELLING

(SEC. 4718)

All concentrated commercial feeding stuffs, other than vitamin D carriers, must be labelled either by a statement printed on the bag or upon a properly attached tag; in the case of concentrated feeding stuff sold in bulk, a certificate which shall contain the information otherwise required to appear upon the bag or upon the tag, may be issued by the dealer in lieu thereof.

The use of wire or any metal in affixing tags is prohibited by law.

The law requires a statement of (1) the net weight of the feed contained in the package; (2) the name, brand or trademark under which the feed is sold; (3) name and address of the manufacturer or importer; (4) the minimum percentages of (a) crude protein and (b) crude fat, and the maximum percentage of (c) crude fiber contained in the feed; (5) the separate ingredients of which the food is composed.

While the law requires only a statement of the items enumerated above no objection will be raised to more complete statements of chemical composition or formula.

REGULATION 3. CONCERNING VITAMIN D CARRIERS

Vitamin D carriers are required to be registered in the same manner and under the same conditions as obtain for feeds in general.

Information to be given on labels and in applications for registrations is (1) name of product; (2) vitamin D potency in terms of A.O.A.C. chick units per gram; (3) name and address of manufacturer, distributor or other person responsible for the product; and, (4) on the label, a statement of net weight or volume.

The A.O.A.C. chick units is the vitamin D activity produced by one U.S. Pharmacopoeia unit of vitamin D from the U.S.P. "Reference Cod Liver Oil", determined by the method of assay adopted by the Association of Official Agricultural Chemists.

Cod liver oils containing less than 85 A.O.A.C. chick units of vitamin D per gram are not acceptable for registration.

REGULATION 4. CONCERNING COTTONSEED MEAL, ETC.

Cottonseed meal, linseed meal, soybean meal, and other vegetable feeds that are sold as fertilizer, are required to be registered under the provisions of the fertilizer law in addition to registration as feeds. If

sold exclusively for one or the other of these purposes, the articles may be registered only under the law which applies.

For such of these articles as are used for fertilizer purposes chiefly or entirely as sources of nitrogen, only nitrogen (or protein) need be declared in the application for registration as fertilizer; and the tags or labels generally attached to such articles when intended for feeding purposes will be acceptable for them when sold as fertilizer.

REGULATION 5. DUTIES OF MANUFACTURERS, JOBBERS AND
DEALERS WITH REFERENCE TO REGISTRATION

(SEC. 4719)

All concentrated commercial feeding stuffs, including vitamin D carriers, must be registered with the Connecticut Agricultural Experiment Station annually on January 1, or before they are offered for sale. Registration blank forms are supplied by the Station.

Manufacturers, jobbers or individuals shipping feeds into Connecticut will be expected to register their brands and pay the necessary fees thereon. **Connecticut dealers should assure themselves that the brands they handle are properly registered and labelled. In case the manufacturer or jobber outside the State neglects or refuses to register, the dealer who handles such feeds will be held responsible for such registrations, registration fees and other legal requirements.**

Dealers within the State who mix their own brands are responsible for the registration and proper labelling thereof.

REGULATION 6. DEFINITIONS OF TERMS USED IN THE LAW,
AND OF OTHER TERMS

Person. The term "person" is accepted as defined in General Statutes, Section 2432; it imports the singular or the plural as the case demands; and includes corporations, companies, societies and associations.

Importer. The term "importer" is defined in the act.

Brand. It is held that a distinct brand name, or a distinct analysis, constitutes a distinct brand.

Definitions for Feeding Stuff's. The definitions and standards for feeding stuffs adopted from time to time by the Association of Feed Control Officials of the United States are accepted as official in carrying out the provisions of this law; and the rules and regulations as adopted by that association are accepted as far as possible and when not inconsistent with the Connecticut statutes.

REGULATION 7. METHODS OF ANALYSIS

(SEC. 4718)

The methods of analysis employed shall be those prescribed by the Association of Official Agricultural Chemists, wherever such methods have been adopted for the determinations desired.

REGULATION 8. CONCERNING MEDICATED FEEDS AND MINERAL MIXTURES

The law does not include medicated products used as "conditioners" for stock and poultry, and which consist essentially of substances possessing or claimed to possess, medicinal or condimental properties; nor does it include products consisting of supplemental minerals.

REGISTRATIONS

For the period January 1, 1939 to December 31, 1939

For the period January 1, 1939, to December 31, 1939, 197 firms registered 1,198 brands of feeding stuffs; and 14 firms registered 20 brands of vitamin D carriers.

As required by statute the registrations are listed as follows:

C. L. Adams Co., (See Park & Pollard Co.)

CLO-TRATE Cod Liver Oil Fortified in Vitamins A and D

INSPECTION

For the year 1939 a total of 1,840 samples of feeding stuffs and related materials have been examined. They are classified as follows:

Concentrated feed stuffs, official samples.....	849
Miscellaneous feeds examined for individuals.....	86
Feeds and other materials examined for poisons.....	89
Pasture grass samples and other fodder materials from Storrs.....	771
Vitamin D carriers.....	45
Total.....	1,840

Samples examined for the Experiment Station at Storrs are in connection with investigations carried on by the Agronomist of that Department and are not for discussion here.

A summary of the results of the inspection and analysis of the official samples of commercial feeding stuffs, other than cod liver oils, is as follows:

Total number of samples.....	849
Samples deficient in:	
one item.....	84
two items.....	11
three items.....	0
Percentage of samples meeting guaranties in all respects.....	95
Total guaranties made.....	89
	2,537 ¹
Guaranties not met:	
protein.....	35
fiber.....	15
fat.....	56
Percentage of guaranties met.....	106
	96

Microscopic examination as to ingredients has shown no substantial variation from the declared composition; and no significant contamination with weed seeds was evident.

Analyses are given in Table 1.

Vitamin D Carriers

R. B. HUBBELL AND E. M. BAILEY.

According to a regulation issued in 1937, vitamin D carriers used as supplements in the feeding of poultry are required to be registered annually with this Station in the same manner and under the same conditions as obtain for feeding stuffs in general. The regulation became effective on January 1, 1938.

Information to be given on labels and in applications for registration is: (1) name of the product; (2) vitamin D potency in terms of A.O.A.C. chick units per gram; (3) name and address of the manufacturer, distributor or other persons responsible for the product; and, on the label, a statement of net weight or volume.

Manufacturers, jobbers or individuals shipping cod liver oil or other vitamin D carriers into Connecticut will be expected to register the brands so shipped and to pay the necessary registration fee on each brand. A distinct brand name or a distinct vitamin D unitage constitutes a distinct brand.

¹Ten samples with only two guaranties.

In case the manufacturer, jobber or individual outside the State neglects or refuses to register, the local dealer who sells such vitamin D carriers, or offers them for sale, will be held responsible for such registration, registration fees and proper labelling. Dealers within the State who sell or offer for sale vitamin D carriers under their own brand names are responsible for registration and proper labelling thereof.

The samples tested under 1939 registrations were seldom taken from original unopened containers but from those being drawn upon for mixing purposes, or for dispensing in small quantities. Under such circumstances the manufacturer may hold that he cannot accept responsibility for the identity or integrity of the oil. On the other hand, the sample taken represents the article in current use in feeds being mixed at the time, and the article which the customer who purchases in small quantities for home mixing receives.

Samples are tested according to the procedure adopted by the Association of Official Agricultural Chemists, and the purpose of the test is to check the declared unitage of vitamin D under which the oils or other D carriers are sold. Results are evaluated on the basis of composite bone ash figures for experimental groups of chicks fed on a standard basal ration plus the D carrier under test, as compared with control groups fed on the same basal ration plus standard reference oil in like dosages and fed under the same conditions. The dosage of oil or other D carrier under test is calculated on the assumption that the carrier contains the unitage of vitamin D claimed for it.

Samples are rated as satisfactory if results indicate that the unitage claimed is met or exceeded; and they are rated "below standard" if the indications are clear that the potency is less than that claimed. Present experience does not justify too strict an interpretation of results and the classification "passed" is made for borderline samples. Samples below standard are checked by a second test before a report is made. Results are reported to the manufacturer or distributor and to the local dealer whose stock was sampled, which is the procedure followed for feeds in general in the course of regular inspection.

Forty-five samples were examined of which 31 were satisfactory, 11 passed and 3 were below standard.

In preliminary tests made in 1937, of 44 samples tested, 27 were satisfactory, 4 passed and 13 were below standard. In 1938, of 55 samples tested, 42 were satisfactory, 5 passed and 8 were below standard. The proportion of samples definitely below standard has decreased from 30 percent to about 7 percent in the last three years, which indicates that guaranties for D carriers have increased in dependability.

MISCELLANEOUS

Eighty-six samples of commercial feeds and other fodder materials have been submitted by dairymen and others for the usual chemical analysis.

One of these, 3392, was dried citrus pulp which was analyzed as follows: Moisture 12.13%, protein (N x 6.25) 5.75%, fiber 7.98%, fat 2.48%, ascorbic acid (Bessey and King, J. Biol. Chem. 103, 690, 1933), 0.35 gm. per gm.

Materials Examined for Poisons

C. E. SHEPARD AND E. M. BAILEY

Eighty-nine samples were examined for poisonous or foreign materials. Of these 19 were commercial feeds, or roughages, produced on the farm, and 70 were chiefly specimens of viscera of domestic animals.

Nothing suspicious was found in any of the commercial feeds. Of the fodder materials, a sample of hay (3200) showed evidence of contamination with spray mixture, arsenic and lead being present in the sample in the amounts of 20 milligrams and 40 milligrams, respectively, per pound.

Weeds (3313) were examined in connection with an investigation of the death of two cows. Our information was that cut weeds had been fed recently to the animals in considerable quantity. Soluble oxalates were present in quantity in the weeds, and poke weed, known to be poisonous, was present in the pasture and had evidently been fed upon. Whether this fodder was the cause of death could not be concluded with certainty, but the owner was advised to discontinue feeding it.

Of the 70 samples of viscera, poisonous materials of possible or probable significance as causes of sickness or death were found in 40. Most of these specimens were referred to us by, or on the advice of, the Commissioner on Domestic Animals, the Department of Animal Diseases of the Storrs Experiment Station, State Police Department, veterinarians and other officials. In the summary given below are the poisonous or other foreign materials found by analysis, and the number of specimens in which each was present. It should be made clear that the findings are only the results of objective examinations of specimens submitted. The examinations are usually supplementary to investigations by others and the significance of our findings has to be considered in connection with conditions and circumstances that are not always a part of our records. On the basis of our findings alone, the presence of grosser amounts of such poisons as strychnine, arsenic, lead, thallium and cyanide are sufficient to indicate probable causes of illness or of fatal effects. Larger amounts of lead are usually associated with circumstances in which paint or spray materials were accessible to the animals. The finding of arsenic usually reveals the likelihood of access to spray materials, unless malicious poisoning is indicated. Strychnine suggests the distribution of poisoned bait; and thallium may be acquired through rat paste or insecticides. Excessive amounts (much in excess of 1 percent) of salt are dangerous for young chicks; older birds tolerate more, but the high percentage of salt in the feed that was fed in the case of the ducks (cited in the table), would no doubt be fatal. Cyanides disappear from animal tissues relatively soon and this poison may escape detection unless examination is made promptly. The significance of small amounts of lead is doubtful, but the frequency with which it is found is of interest. When found in the liver (i.e. absorbed), its significance is more direct.

Residues of an alkaloidal nature are often indicated but in most cases the identities are not satisfactorily established. Strychnine is readily identified by chemical tests and generally corroborated by injection into a frog. Atropin and nicotine have been isolated and identified in specimens submitted in other years.

SUMMARY OF MISCELLANEOUS SPECIMENS

Poisons or foreign materials found	No. of specimens	Remarks
Lead	10	In two, quantities ranged from 3 to 7.6 p.p.m. In seven, the range was 13 to 65.8 p.p.m. One specimen contained 762 p.p.m.
Lead and copper	2	Copper much; lead 0.6—3.3 p.p.m. (Stomach contents of dogs).
Lead and Cyanide	1	Cyanide trace; lead 20 p.p.m. (Crop and gizzard of chicks).
Lead and zinc	1	Lead 1.2 p.p.m.; zinc 72 p.p.m. (Chicken livers).
Lead and arsenic	12	Six specimens feces and urine of dogs. In feces, lead 10.2—42.0 p.p.m.; arsenic none or trace. In urine, arsenic .07—30.0 p.p.m.; lead not determined. One specimen, total, viscera of bird, lead 0.39 mgm., arsenic 0.21 mgm. One specimen stomach contents of calf, arsenic 2.1 p.p.m., lead 3.2 p.p.m. Other specimens qualitative only.
Arsenic	1	Stomach contents sheep, arsenic 358 p.p.m. liver 76.8 p.p.m.
Salt	2	Crop and gizzard of duck contained 3.23 % salt (NaCl). Feed (said to be mill sweepings) contained 18.68 % salt.
Strychnine	5	Quantities found; .005 gm. to .091 gm. Others qualitative only. Confirmed by biological test on frogs.
Thallium	4	2.91 % thallium sulphate in vomitus of dog. Thallium present in liver. Others qualitative only.
Zinc and barium	1	In stomach contents of horse. (Casein paint on hay fed).
Alkaloids	1	Indicated; not identified.
